Author's Declaration

Font: Arial, Size: 14

I hereby declare that I am the sole author of this report. This is a true copy of the report, including any required final revisions, as accepted by my examiners. It is further declared, that I have fulfilled all the requirements in line with the Quality Assurance guidelines of the Higher Education Commission.

I understand that my project report may be made electronically available to the public.

Abstract

Enter abstract here. No more than one page.

The abstract should be a concise summary of the entire project (approx. 250-300 words). Include the problem statement, the objective of the study, the methodology used (e.g., CNN, Random Forest), the key results achieved (accuracy/ precision), and the conclusion. Explain why this project is significant in the field of Machine Learning

Keywords: No more than 5 keywords.

Acknowledgements

Enter acknowledgements here.

[It is suggested that the student acknowledge the help/contribution of his/her supervisor/co-supervisor, the parent university, sister university/institution, any funding agency/source, relevant experts guiding the student's work, staff assisting in experimental/field work.]

List of Figures

Font: Arial, Size: 14

Figure 1: The incoming workload distributed model

1

List of Tables

Table 1: SMGLB Improvement over benchmark algorithms	2
Table 2: Performance matric	6

List of Acronyms

Font: Arial, Size: 14

GCV	Gross Calorific Value
NCV	Net Calorific Value

CHAPTER 1 INTRODUCTION

All chapter headings
Font: Arial, Size: 14 pts
All capital letters
Left aligned

1.1 Background

Font: Arial, Size: 12 pts, Left

Describe the domain of your project. For example, if it's image recognition, discuss the evolution of computer vision.

1.2 Problem Statement

Clearly define the problem you are trying to solve. Why is this specific ML model needed?

1.3 Problem Objectives

List the specific objectives you intend to achieve by the end of this project.

All figure captions placed below the respective figures, centre aligned, font: Times New Roman, Size: 12

Figure 1: The incoming workload distributed model

Table 1: SMGLB Improvement over benchmark algorithms

Comparison Factor	SMGLB Improvement Over		
	B1	B2	B3
Operating Cost	74.61%	83.67%	31.37%

All tables center aligned

All table captions placed above the respective tables, center aligned, font: Times
New Roman, Size: 12 pts
Numbered including chapter number

CHAPTER 2 LITERATURE REVIEW

Review existing research and projects related to your topic. Discuss what other researchers have done, what algorithms they used, and what gaps exist that your project aims to fill. Cite at least 5-10 academic sources or industry papers.

CHAPTER 3 METHODOLOGY

Review existing research and projects related to your topic. Discuss what other researchers have done, what algorithms they used, and what gaps exist that your project aims to fill. Cite at least 5-10 academic sources or industry papers.

3.1 Data Collection

Where did you get your data? (e.g., Kaggle, UCI Repository, Scraped data).

3.2 Data Preprocessing

This is a critical stage in the ML pipeline. Steps include:

- Normalization/Scaling
- Handling Missing Values
- One-Hot Encoding of Labels
- Data Augmentation (if applicable)

3.3 Model Architecture

Describe your model layers (Input, Hidden, Output). For a CNN, list the Convolution, Pooling, and Dense layers.

CHAPTER 4 SOLUTION & IMPLEMENTATION

4.1 Hardware and Software Requirement

Python, TensorFlow/Keras, Jupyter Notebook, RAM/GPU specifications.

4.2 Algorithm Implementation

Explain the code logic. Mention hyper parameters like Learning Rate, Epochs, and Batch Size.

CHAPTER 5 RESULTS AND DISCUSSION

5.1 Performance Metrics

Python, TensorFlow/Keras, Jupyter Notebook, RAM/GPU specifications.

Table 2: Performance matrix

Metric	Training Set	Validation Set
Accuracy	[Value]%	[Value]%
Loss	[Value]	[Value]

5.2 Confusion Metrics/Charts

Include graphs of Accuracy vs. Epochs and Loss vs. Epochs. Discuss the findings.

CHAPTER 6 CONCLUSION AND FUTURE WORK

6.1 Summary

Briefly restate the success of the project.

6.2 Limitations

What could the model not do? (e.g., poor performance in low light).

6.3 Future work

How can this model be improved? (e.g., using a larger dataset or deeper architecture).

REFERENCES

Only include references that are mentioned in the text of the document. To have consistency in citation and references list, the citation can be made through available citation managers like EndNote, Jabref, Mendeley, Zetero, ReadCube, Papers, and RefWorks. Using the references managers, will automatically generate the references list which avoids any inconvenience faced during manual entry of the same.

List all sources in IEEE format.
